

Pubblicazioni Internazionali sull'argomento dal 2000 ad oggi

1. Ventura C., Maioli M. Opioid peptide gene expression primes cardiogenesis in embryonal pluripotent stem cells. **Circ. Res.** 87:189-194, 2000.
2. Ventura C., Zinellu E., Maninchedda E., Fadda M., Maioli M. Protein kinase C signaling transduces endorphin-primed cardiogenesis in GTR1 embryonic stem cells. **Circ. Res.** 92:617-622, 2003.
3. Ventura C., Zinellu E., Maninchedda E., Maioli M. Dynorphin B is an agonist of nuclear opioid receptors coupling nuclear protein kinase c activation to the transcription of cardiogenic genes in GTR1 embryonic stem cells. **Circ. Res.** 92: 623-629, 2003.
4. Ventura C., Maioli M., Asara Y., Santoni D., Scarlata I., Cantoni S., Perbellini A. Butyric and retinoic mixed ester of hyaluronan: A novel differentiating glycoconjugate affording a high-throughput of cardiogenesis in embryonic stem cells. **J. Biol. Chem.** 279:23574-23579,2004.
5. Ventura C., Maioli M., Asara Y., Santoni D, Mesirca P., Remondini D., Bersani F. Turning on stem cell cardiogenesis with extremely low frequency magnetic fields. **FASEB J.** express article 10.1096/fj.04-2695fje. Published online October 26, 2004.
6. Ventura C., Maioli M., Asara Y., Santoni D, Mesirca P., Remondini D., Bersani F. Turning on stem cell cardiogenesis with extremely low frequency magnetic fields. **FASEB J.** 19:155-157, 2005.
7. Ventura C. Forced myocardin expression primes cardiac and smooth muscle transcription patterning in human mesenchymal stem cells. **Cardiovasc. Res.** 67:182-183, 2005.
8. Ventura C., Branzi A. Autocrine and intracrine signaling for cardiogenesis in embryonic stem cells: a clue for the development of novel differentiating agents. **Handb. Exp. Pharmacol.** 174:123-146, 2006.
