***New horizons in science and humanities learning:  
defining targets, content, and formats***

Residenza S. Giovanni in Monte  
(Fondazione C.E.U.R. - Collegio Erasmus)  
Via De' Chiari 8 – 40124, Bologna

22-23 September, 2007

General outline of the event

The workshop is aimed at fixing guidelines for designing, implementing and testing the new teaching modules interfacing science and the humanities that every sub-project of Acume 2 is expected to produce within the next two years. The working sessions will include:

1. An outline of several, relevant examples of integrated teaching tools already developed by European and American universities.
2. A number of ‘good practice’ reports in the field of integrated teaching tools by representatives of some European universities.
3. The presentation of three teaching modules (on ‘Ageing’, ‘Evolution’ and ‘Electrifying Culture’) being developed by scholars working in the Acume 2 project.
4. An open discussion on: assessment of all the teaching materials collected; involvement into the Acume 2 project of other scholars with an experience or an interest in integrated programmes; guidelines for designing, implementing and testing the new teaching modules.
