Welcome from the Chairs

It gives us great pleasure in welcoming the participants to the First European Conference on Microfluidics (mFlu'08) in Bologna, Italy. This Conference is the International version of the Microfluidics French Conference held in Toulouse for three editions from 2002 to 2006 and organized by Prof. Colin at INSA. In our mind, this International evolution of the Conference has to be considered as an unavoidable step to transform the Conference in a major gathering place for learning and generating new ideas through interactions among researchers engaged in diverse fields focused on microscale phenomena in Europe and in the world. For this reason, the main objectives of this conference are to strengthen the links inside the European scientific community in this young discipline and to promote exchanges between European Universities and Industrial companies engaged in this field, as well as to spread European Microfluidics research in countries outside from Europe and to increase connections between European researchers and researchers from other countries.

We are excited about the high level of interest from across the world on this Conference. Microfluidics finds now applications in every industrial sector, as well as in numerous media covered fields like biology, medicine, chemical and process engineering, transports, environmental sciences, microelectronics...

This Conference will present original fundamental and applied works which cover a broad array of topics at microscale, including Gas Microflows, Liquid Microflows, Two-Phase Flows in Microsystems, Microflows in Bioengineering and Biofluidics, Microfabrication Techniques for Microfluidic Systems, Lab on a Chip and Miniaturized Chemistry, Electrokinetic Microflows, Microdroplets management, Fluidic Microactuators and Micromixing and Microflow Visualisation and Measurements.

The Conference is a joint effort from two institutions: Alma Mater Studiorum Università di Bologna and INSA Toulouse. The Conference is being hosted in the new building of the School of Engineering of the University of Bologna, the oldest European University with more than nine centuries of history. The School of Engineering of the Alma Mater Studiorum-Università di Bologna offers students a wide range of academic degree courses, featuring innovative elements; with its 15 undergraduate degree courses, 10 postgraduate degree courses and one European postgraduate degree course, it covers the Industrial, Information Technology, Environmental, Civil and Architectural-Building areas. The field of Microfluidics represents a exciting borderline scientific topic for this School.

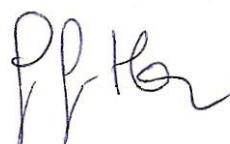

We would like to thank the authors for selecting this Conference as the venue to disseminate their findings. We are deeply indebted to the track chairs, session chairs, scientific committee members for their work with the abstract evaluation and selection process. Without their dedicated efforts, we would not have been able to organize and present this Conference. Besides, we thank all the external reviewers for their efforts spent to guarantee a high scientific level of the papers that are being presented in this Conference.

Finally, we highlight that this Conference could not be organized without the dedicated help of SHF (Société Hydrotechnique de France), the organizing committee members and the staff of the DIENCA chaired by Prof. Salvigni. We would like to thank each and everyone at Bologna and Toulouse who have helped us in making the Conference a glowing partnership of Alma Mater Studiorum-Università di Bologna and INSA Toulouse.

We hope that you will have a very enjoyable and professionally useful Conference, profitable scientific discussions and that you will meet a lot of new people and friends!
