Joint International Workshop

UNDERSTANDING AND PROMOTING CHANGE FROM EARLY TO COMPLEX SKILLS IN TYPICAL AND ATYPICAL DEVELOPMENT: A CROSS-POPULATION APPROACH

An international workshop on new research perspectives and methodologies for understanding and promoting change in typical and atypical development. The workshop will bring a cutting edge view on the interplay between early skills and the environment and the connections between theoretical and intervention models with an interdisciplinary and cross-population approach. Researchers, clinicians and students will have the opportunity to discuss new approaches and methodologies for studying typical and atypical development and transfer this knowledge to clinical and educational settings.
