INCO-PILES network project aimed at evaluating innovative technologies for the sustainable extraction of CRMs from mining waste, with a focus on the EIT Regional Innovation Scheme (RIS) strategic area. Two round-tables were organised in 2020 and 2021 to share expertise and experience.

This final conference will focus on presenting:

- A case study in Greece: bauxite residues and CRM including Rare Earth elements,
- Environmental and economic assessment issues related to tailings management.
